OBSERVATION

First, Descriptive Statistics was attempted on the Salary column. Excel showed an error because the Salary column contained Unknown values. A Numeric Salary helper column was then created using FILTER() and ISNUMBER() to keep only numeric salary values, and this numeric Salary column was used for Descriptive Statistics.

DAY 10 – DESCRIPTIVE STATISTICS

STEP 2 – Salary Descriptive Statistics Result

OBSERVATION

Descriptive Statistics was successfully generated for the numeric Salary values. The result includes Mean, Median, Standard Deviation, and Count for 142 numeric salary records.
